Using the Jones calculus for the optical polarizer ... If the centers of molecules are separated by a vector r_{ij} and the molecular axes are oriented along unit vectors e_i and e_j , then the force on molecule i due to j reads $f_{ij} = -\nabla_{r_{ij}} v_{ij}$. Using the chain rule, we obtain $f_{ij} = -\partial v_{ij} / \partial r_{ij} \nabla_{r_{ij}} r_{ij} - \sum_{\alpha=i,j} \partial v_{ij} / \partial r_{i\alpha} \nabla_{r_{i\alpha}} r_{ij}$
